

## INTEGRATED MANAGEMENT SYSTEM POLICY

**FOYLE  
PORT**

Londonderry Port and Harbour Commissioners is a Trust Port established by Act of Parliament in 1854 and the Londonderry Port and Harbour Act Northern Ireland (1970). The Port serves the North West of Ireland and its hinterland.

Activities on site include the loading and discharge from vessels of bulk materials, such as; coal, animal feeds, cement, glass minerals, fertilisers as well as timber and fresh fish. LPHC also provides a marine service which includes but is not limited to towage, pilotage, navigation and conservancy.

It is the policy of Londonderry Port to provide the best possible service to its customers and considers no aspect of its business as being of greater importance than the protection of the environment, prevention of pollution and the elimination of work related injuries and illness. To achieve this goal, LPHC operates an Integrated Management System in compliance with ISO:14001 Environmental Management, ISO:9001 Quality Management and OHSAS:18001 Health & Safety Management.

### *Commitment*

LPHC is committed to providing a clean and safe working environment where the impacts of its operations are minimised. We will achieve this by complying with all Environmental Health and Safety laws pertaining to Port operations, training our employees and maintaining the resources necessary to implement our programmes and continually improve operations at site.

### *Responsibility*

All employees, regardless of their jobs at Londonderry Port, must take individual responsibility for providing a best in class service, preservation of the environment and take reasonable care of their own and their colleagues' health and safety.

### *Communication*

The Policy is communicated to all persons working for or on behalf of the Organisation by posting the document internally and externally to all interested parties on request.

### *Continuous Improvement*

We have specific objectives, targets and management programmes which are periodically reviewed to ensure continuous improvement in reducing risks to people, the environment and consumption of natural resource.
